- Injection: 90 mg/1.0 mL and 45 mg/0.5 mL PFS
- Injection: 45 mg/0.5 mL vial
- Injection: 130 mg/26 mL vial

c. Dating Period:

- **Drug Product:**
  - **90 mg/1.0 mL and 45 mg/0.5 mL PFS:** 36 months at 2°C to 8°C
  - **45 mg/0.5 mL and 130 mg/26 mL vials:** 24 months at 2°C to 8°C
- **Drug Substance:** (b) (4)
- **For packaged products:** Not Packaged
- **Stability Option:** N/A

d. Exempt from lot release:

- Yes
- Rationale, if exempted: Wezlana is exempted from lot release per FR 95-29960.

e. Draft Phase 4 (Post-Marketing) Commitments, Requirements, Agreements, and/or Risk Management Steps, as applicable

PMC #4540-1: To develop a Monocyte Activation Test (MAT) for reliable endotoxin detection of the 130 mg drug product vial presentation and, if applicable, perform method validation with three batches of drug product. In addition, to concurrently develop an alternative endotoxin detection method which is not subject to low endotoxin recovery for the 130 mg drug product vial presentation as a mitigation, in case the MAT method proves infeasible and, if applicable, perform method validation with three batches of the 130 mg drug product vial presentation. Method feasibility study (MAT or alternative method) will be submitted by the end of July 2024

Final report submission date: June 2025

4. Basis for Recommendation

a. Summary:

ABP 654 is a recombinant human IgG1 directed against the shared p40 subunit of IL-23 and IL-12 cytokines. It is a proposed biosimilar to US-Stelara for the same indications as US-Stelara including moderate to severe PsO, PsA,
